Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

DETAILED ACTION

Allowable Subject Matter

Claims 1-27 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 10 and 19, the prior art of record discloses a satellite communications system comprising a ground station, including communications equipment and an antenna, located at a position on the earth (see Higgins US 2001/0045494, ¶ 0010 & 0011), a plurality of satellites in orbits around the earth having apogees and perigees (Higgins, table 4), each of the satellites having communications equipment configured to communicate with the ground station only during a predetermined portion of the satellite's orbit proximate to apogee (¶ 0120- 0126). However, the prior art of record fails to specifically disclose the orbits of the plurality of satellites being configured to form at least two ground tracks on the earth displaced from each other longitudinally, each of the ground tracks repeating daily and having a number of active arcs, each active arc corresponding to the portion of the orbit of each satellite during which the communications equipment on the satellite is enabled to communicate with the ground station, the orbits of the plurality of satellites being further configured such that at all times there are at least two of the satellites in each of the active arcs and such that at all times each of the satellites in any one of the active arcs is separated by at least a predetermined angle, as observed from the ground station, from each other satellite in the same active arc and from any satellite in any other active arc.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

LaPrade et al (US 2002/0177403) teaches a high availability broadband communications satellite system using satellite constellations in elliptical orbits inclined to the equatorial plane.

Castiel et al (US 2002/0017593) teaches a virtually geostationary satellite array.

Castiel et al (US 2002/0160710) teaches a fixed satellite constellation system employing non-geostationary satellites in sub-geosynchronous elliptical orbits with common ground tracks.

Higgins (US 2001/0045494) teaches a method for limiting interference between satellite communications systems.

Porcelli et al (US 6,333,924) teaches a high latitude geostationary satellite system.
